

The paths have challenging terrain with gravel, lava fields, uneven ground and steep hills.

Path A is now open again after constructions on the site.

Path B is 3 km long and has view of the "backside" of the crater, not much to see unless there is a lot of activity.

Path by Langihryggur is 4 km and can offer a better view of the crater.

Before heading to the volcano please look at [Safetravel.is](https://safetravel.is) for current safety information.
